

Antimicrobial Nozzle Protection

Antimicrobial and bacteriostatic properties

Antimicrobial Nozzle Protection significantly affects the cleaning and disinfection processes, reducing the possibility of surface cross-contamination, coming from the nozzle protection material.

- Antimicrobial *Polsilver* additive limits the growth of bacteria, including *E. coli* and *S. aureus* up to 92.1%.
- The antimicrobial properties test has been carried out according to ISO 22196, 2011 Measurement of antibacterial activity on plastics and other non-porous surfaces.

Hexagonal Nozzle Protection shape prevents rolling of the lance and the accidental disappearance.
